According to the Secretariat of the National Iranian Nursing Research Network based in Tabriz, the sixth session of the "System for monitoring scientific developments in nursing" working group was held at the Faculty of Nursing and Midwifery in Tabriz. The details of the meetings are as follows:

Differences between the management dashboard project and the existing Big Data and the types of data required for the nursing research data center and information were discussed

The guest of the meeting, Dr. Mehrdad, gave brief explanations about the projects containing data such as the elderly data project, nurse study, etc. and then announced their readiness to share the available big data with nursing researchers. It was decided that the existing systems in the country, which contain large data that can be used by nursing researchers to be identified and reported first. (Systems and registers, etc. and related to nursing and health) and also consult with doctoral students or members of the General Assembly to prepare a report in this regard.
